

# BG NRG Lubrication System

## Why we developed NRG Products

- Since the invention of the engine, engine manufacturers and oil companies have been trying to find a way to increase the performance of all oil dependent engines. Until the discovery of NRG products, the automobile and industry sectors had to live with the harmful effects of friction, high temperatures, and high fuel consumption.
- More damaging, especially in the automobile industry, is the harmful occurrence of wear and tear on one's engine caused at the starting of each operation.
- The Society of Automotive Engineers (SAE) states that up to **"80% of the total wear inside the engine occurs within the first 10 seconds of operation."**

NRG lubricates every moving surface and clings to the metal and is bonded in place keeping your engine lubricated during those first crucial 10 seconds to *protect your engine, adding years to your cars life and save your maintenance cost!*

## NRG For a better, cleaner world for our children –for the future!

- Today, more than ever before, ecology and quality of life are of paramount importance. NRG high technology have proven themselves to be effective in the battle against pollution of engines machinery without reducing the quality of the engines performance.
- NRG is the only one that can reduce smoke opacity up to 34.6% (Colorado State University) and is environment friendly.** NRG products that were awarded a **Gold Medal in Germany**, are non-toxic and not hazardous products.
